

SOLANODE

Solar Cathodic Protection Solutions

POLE MOUNTED SOLAR CATHODIC PROTECTION SYSTEM DESIGNED FOR THE CITY

The SolAnode is the solution for CP current in urban areas. It has a small footprint, requires no AC service drop, and is simple to install. For smaller CP power requirements, we offer a standard size pole and cabinet system which expedites delivery, installation, and reduces cost (larger outputs are available in other configurations).

SOLANODE ADVANTAGES

- Professional design and sizing for reliability
- Minimal installation footprint
- Theft resistant design
- Ready for installation
- Top quality components
- No AC power required
- Complete solar CP system
- 3 to 5 day battery backup options
- Touch safe terminals

FEATURES

- Theft resistant and DOT compliant pole, base and cabinet
- CP controller with multiple modes of operation and built in logging capability
- Remote monitoring available
- 3-5 days autonomous operation

STATE-OF-THE-ART CP CONTROLLER

- The SolAnode features a state-of-the-art CP controller that can:
- output steady voltage
 - operate in auto-potential mode (for buried reference electrode)
 - operate in constant current mode

SOLANODE

Solar Cathodic Protection Solutions

PAD MOUNT SOLANODE

The secure pad mount SolAnode system is the solution for CP current in rural or remote areas. It's secure design leaves no exposed hardware and deterstheft. These systems are usually used with any new or existing groundbed.

The pad mount SolAnode features a state-of-the-art CP controller that can output steady voltage, operate in auto-potential mode (if you install a buried reference electrode), or in constant current mode.

If you need CP current quickly and reliably in remote areas, a pad mount SolAnode system is the ideal solution. You can get it fast and install it exactly where you need the CP current. There's no need to locate your ground-bed near an AC power source, or go through the process of designing, building and paying for an AC power drop, which is often slow, unpredictable, and costly process.

SOLANODE ADVANTAGES

- Professional design and sizing for reliability
- Custom battery backup options
- Unique CP controller
- Top quality components
- Complete Solar CP system theft resistant design
- No AC power required
- Touch safe terminals
- Secure and enclosed
